

Unlocking Full Stack Potential: Insights and Tips

by Ziv Chen

Before the Interview

Review the Job Description:

- Go over the job requirements and responsibilities to ensure you're aligned with what the role entails.
- Note the technologies, frameworks, or methodologies mentioned.
- Think about questions related to the key areas and technologies listed.

Research the Company:

- Learn about the company's products, services, and mission.
- Find out which technologies the company uses by checking their website or tech blogs.
- Look into any recent projects or news related to the company.

Review lists of commonly asked coding interview problems

Outline your approach before writing any code. Discuss your plan with the interviewer

Ask clarifying questions to ensure you fully understand the problem

Break problems into smaller, manageable parts and explain each step as you go

Explain your thought process to the interviewer, even if you're unsure about the solution.

If you can't solve the entire problem, try to solve part of it or provide a basic solution. Ask for hints

Be Prepared For Live Coding

The most popular JS interview tasks for Live Coding

Closures

Write a function that returns another function that increments a counter by 1 each time it is called

```
1  function createCounter() {  
2      let count = 0;  
3      return function() {  
4          count++;  
5          return count;  
6      };  
7  }  
8  
9  const counter = createCounter();  
10 console.log(counter()); // 1  
11 console.log(counter()); // 2  
12 console.log(counter()); // 3  
13
```

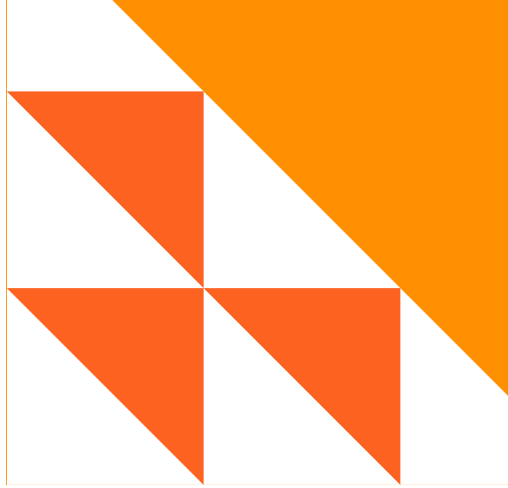

The most popular JS interview tasks for Live Coding

«this» Context

Explain what will be logged
to the console and why.

```
1  const person = {  
2    name: 'Alice',  
3    greet: function() {  
4      console.log(`Hello, my name is ${this.name}`);  
5    }  
6  };  
7  
8  const greet = person.greet;  
9  greet(); // What will be logged?
```

The most popular JS interview tasks for Live Coding

Promises and async/await

Write a function that
sequentially performs two
asynchronous calls and
returns the result

```
1  function asyncCall1() {  
2    return new Promise(resolve =>  
3      setTimeout(() => resolve('First call'), 1000));  
4  }  
5  
6  function asyncCall2() {  
7    return new Promise(resolve =>  
8      setTimeout(() => resolve('Second call'), 1000));  
9  }  
10  
11  async function makeCalls() {  
12    const result1 = await asyncCall1();  
13    const result2 = await asyncCall2();  
14    return [result1, result2];  
15  }  
16  
17  makeCalls().then(result => console.log(result));
```

The most popular JS interview tasks for Live Coding

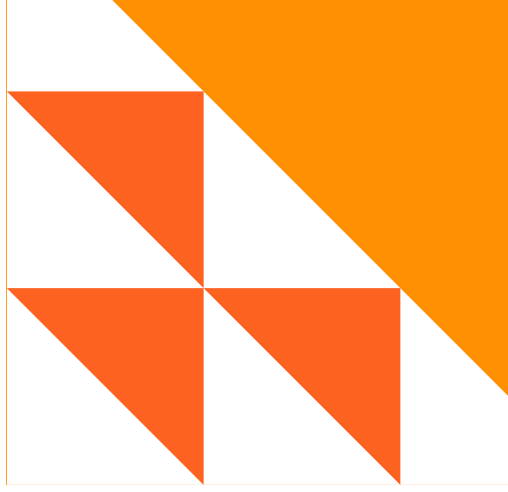

Event loop

What will be the order of the console logs?
Explain why each log is executed in that order.

P.S. To solve this task, you need to understand the difference between macro-tasks and micro-tasks

```
1 console.log('Start');
2
3 setTimeout(() => {
4   console.log('Timeout 1');
5 }, 0);
6
7 Promise.resolve().then(() => {
8   console.log('Promise 1');
9 });
10
11 setTimeout(() => {
12   console.log('Timeout 2');
13 }, 0);
14
15 Promise.resolve().then(() => {
16   console.log('Promise 2');
17 });
18
19 console.log('End');
```

The most popular JS interview tasks for Live Coding

Algorithms and Data Structures

Write a function that checks if a string is a palindrome (reads the same forwards and backwards).

```
1  function isPalindrome(str) {  
2    const cleanedStr = str.replace(/[^\w-0-9]/g, '').toLowerCase();  
3    const reversedStr = cleanedStr.split('').reverse().join('');  
4    return cleanedStr === reversedStr;  
5  }  
6  
7  console.log(isPalindrome('A man, a plan, a canal, Panama')); // true  
8  console.log(isPalindrome('hello')); // false
```

React Live Coding Tasks

- **To-Do List Application**
- **Create a search filter component that filters a list of items based on user input**
- **Fetch data from an API and display it**
- **Build a form with validation that submits data**
- **Create a modal component that can be opened and closed**

Home Assignment

Showcase **All your Skills**
and do exactly what the
task asking you for!

The **BONUS** part, is the
TASK !

Tips for Home Assignment

React (Front-End):

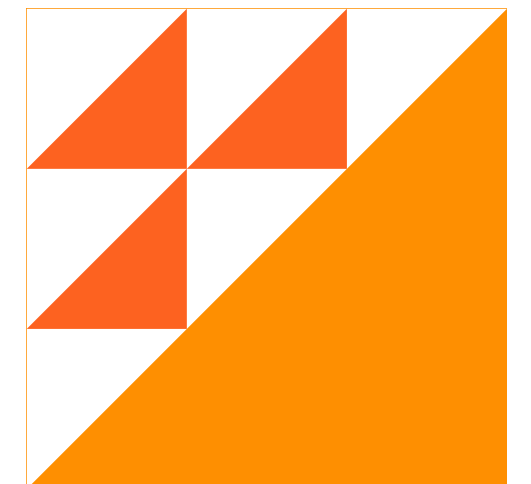

- * Design reusable and well-organized components.
- * Use state management libraries, or demonstrate effective use of React's built-in state and context API.
- * Optimize rendering and performance where applicable.

Node.js (Back-End):

- * Create RESTful APIs and ensure they are well-documented.
- * Error Handling: Implement proper error handling and validation for user inputs and API responses.
- * Address common security concerns, such as input validation and protection

Databases:

- * Design an appropriate database schema based on the requirements.
- * Implement Create, Read, Update, and Delete operations effectively.

Think about potential questions or criticisms that might come up during the interview about your task and prepare answers
